

Gibb-Gro

Boost Pasture Growth

Save Money and Reduce Nitrogen Inputs

USE LESS NITROGEN – SAVE YOUR DOLLARS

The pressure is on you to reduce Nitrogen usage. It seems as though many of you are between a rock and a hard place!

We believe that 18 units of Nitrogen (approximately 40kg Urea) or equivalent in Nitrogen coated products plus GIBB-GRO will grow as much feed as 32 units of Nitrogen (approximately 70kg Urea) on its own. Plus this will save you money.

Many of our clients have not put on more than 40kg Urea (or equivalent) per hectare for years when using with GIBB-GRO. So let's look at the costings.

	Urea Cost – based on \$902/tonne +GST	GIBB-GRO cost based on \$6.50/ha+GST	TOTAL COST	You Save
Urea – 1 ha using 70kg/ha	\$63.14		\$63.14	
Urea – 1 ha using 40kg Urea + 9g GIBB-GRO	\$36.08	\$6.50	\$42.58	\$20.56 (32%)
Urea – 100 ha using 70kg/ha	\$6,314.00	-	\$6,314.00	
Urea – 100 ha using 40kg Urea + 9g GIBB-GRO	\$3,608.00	\$650.00	\$4,258.00	\$2,056.00 (32%)

So, if our sums are right you not only save \$2,056.00+GST on application to 100 hectares you get an immediate growth response, which continues until its peak in 3 weeks.

Whether we like it or not most of us are turning a bit green. Many times, we have been told by clients that they feel better about themselves now they are using fewer N-type products, and as is often the case when embarking on sustainability projects there is often a cost-saving benefit.

GIBB-GRO - PRICED AT ONLY \$6.50 PER HECTARE +GST DELIVERED WITHIN NEW ZEALAND.

Urea pricing is based on prices published on <https://www.ravensdown.co.nz/media/6247/fertiliser-price-list-1st-july-2023.pdf>. Gibb-Gro prices are based on prices published on www.Gibb-gro.co.nz, both as of 1st July 2023.
