

Gibb-Gro Wetter is a high-quality alcohol ethoxylate wetter specially designed to improve uptake and performance of Gibb-Gro (gibberellic acid 90%).

Gibb-Gro Wetter can also be used as a wetter and penetrant for general horticultural and agricultural use with herbicides and pesticides, where indicated on the label.

### **HOW IT WORKS**

Gibb-Gro Wetter reduces the surface tension of the spray droplets, which means they spread more evenly on the plant. This provides a continuous film which means the chemical is in contact with a bigger surface area. This in turn allows for better and faster uptake into the plant and improved rain fast times.

### **USAGE INSTRUCTIONS**

Use as a spray tank additive to improve uptake and reduce rain risk. Gibb-Gro Wetter provides maximum benefit when spraying in marginal conditions. When using with Gibb-Gro (Gibberellic Acid 90%) use 25ml/100L. When using with herbicides use 100ml/100L unless a different rate of use is recommended on the herbicide label.
